Generative AI is one of the most sought after skills right now, but getting hands-on practical experience using the latest technology can be a challenge. In this course, Building Generative AI Applications with Amazon Bedrock, you'll learn to leverage the power of generative AI for your applications. First, you'll explore how to build a simple interactive application. Next, you'll discover how to implement retrieval augmented generation using Bedrock Knowledge Bases. Finally, you'll learn how Bedrock Agents can be used to automate workflows. When you're finished with this course, you'll have the skills and knowledge of generative AI on AWS needed to Build generative AI applications using Amazon Bedrock.
